

Table 11.8 Effect Sizes (d) for Pairwise Comparisons

<i>Comparison</i>	<i>Mean Difference</i>	<i>Pooled Variance</i>	<i>d</i>
CBT and PDT	$8 - 15.5 = -7.50$	$SD_p^2 = \frac{(5)4.65^2 + (5)3.39^2}{(5) + (5)} = 16.56$	$d = \frac{-7.50}{\sqrt{16.56}} = -1.84$
CBT and NT	$8 - 16.33 = -8.33$	$SD_p^2 = \frac{(5)4.65^2 + (5)5.35^2}{(5) + (5)} = 25.12$	$d = \frac{-8.33}{\sqrt{25.12}} = -1.66$
NT and PDT	$15.5 - 16.33 = -.83$	$SD_p^2 = \frac{(5)5.35^2 + (5)3.39^2}{(5) + (5)} = 20.06$	$d = \frac{-.83}{\sqrt{20.06}} = -.19$
