

FIGURE 3.7 ■ The EVL Theory When the Citizen Has a Credible Exit Threat ($E > 0$) and the Government Is Autonomous ($L < 1$)

Note: E = citizen's exit payoff; 1 = value of benefit taken from the citizen by the government; L = government's value from having a loyal citizen who doesn't exit; c = cost of using voice. It's assumed that $c, L > 0$; $E < 1 - c$; $E > 0$; $L < 1$.
