

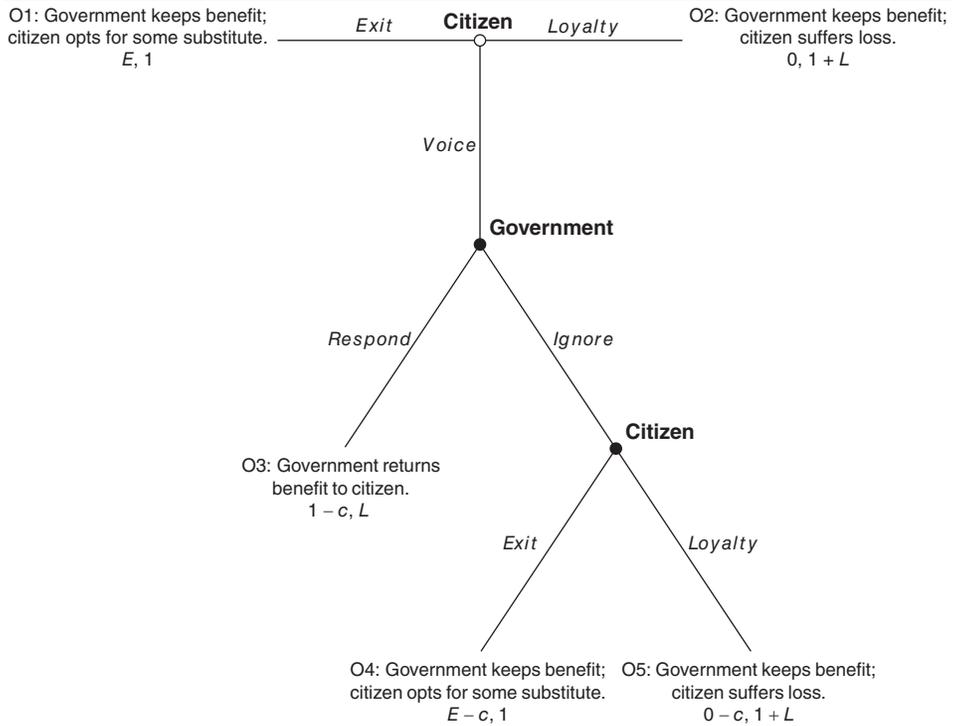

**FIGURE 3.2 ■ The Game Tree for the EVL Theory With Payoffs**

*Note:*  $E$  = citizen's exit payoff;  $1$  = value of benefit taken from the citizen by the government;  $L$  = government's value from having a loyal citizen who doesn't exit;  $c$  = cost of using voice. It's assumed that  $c, L > 0$ , and that  $E < 1 - c$ . The citizen's payoffs are shown first because they're the first player to make a choice; the government's payoffs are shown second. A comma separates the payoffs for the two actors.
