

Crossword Puzzle

A crossword puzzle grid with 24 numbered starting points for words. The grid consists of white squares for letters and empty spaces for non-letters. The numbered squares are:

- 1: Top-left corner.
- 2: Row 2, column 1.
- 3: Row 2, column 10.
- 4: Row 2, column 15.
- 5: Row 5, column 1.
- 6: Row 5, column 2.
- 7: Row 5, column 15.
- 8: Row 6, column 2.
- 9: Row 6, column 15.
- 10: Row 7, column 1.
- 11: Row 8, column 11.
- 12: Row 9, column 1.
- 13: Row 9, column 6.
- 14: Row 10, column 3.
- 15: Row 10, column 1.
- 16: Row 11, column 12.
- 17: Row 11, column 14.
- 18: Row 11, column 16.
- 19: Row 11, column 18.
- 20: Row 12, column 4.
- 21: Row 12, column 17.
- 22: Row 13, column 1.
- 23: Row 14, column 2.
- 24: Row 14, column 12.

Across

2. a scale of measurement that conveys order or rank only
3. a conceptual variable that is known to exist but cannot be directly observed
5. an observable behavior or event of a construct that is presumed to reflect the construct itself
7. a limitation in the range of data measured in which scores are clustered to one extreme
8. the extent to which a measure can change or be different in the presence of a manipulation
9. a small preliminary study used to determine the extent to which a manipulation or measure will show an effect of interest
10. any value or characteristic that can change or vary from one person to another or from one situation to another
13. preconceived ideas or expectations regarding how participants should behave or what participants are capable of doing
15. a validity measurement for the extent to which scores obtained on some measure can be used to infer or predict a criterion or expected outcome
16. the procedure of converting a categorical variable to numeric values
17. a scale of measurement that has a true zero and is equidistant
19. a scale of measurement in which a number is assigned to represent something or someone
20. a type of variable that varies by value or amount
22. a type of variable that varies by class or category
23. a scale of measurement in which the value 0 truly indicates nothing
24. a measure of reliability that indicates the extent to which two or more raters of the same behavior or event are in agreement with what they observed

Down

1. a validity measurement for the extent to which the items or contents of a measure adequately represent all the features of the construct being measured
4. the consistency, stability, or repeatability of one or more measures or observations

6. a measure of reliability that indicates the extent to which a measure or observation is consistent or stable at two points in time
11. a scale of measurement that has no true zero and is distributed in equal units
12. a validity measurement for the extent to which a measure for a variable or construct appears to measure what it is purported to measure
14. a type of variable that is measured in whole units or categories that are not distributed along a continuum
16. a validity measurement for the extent to which an operational definition for a variable or construct is actually measuring that variable or construct
18. a type of variable that is measured along a continuum at any place beyond the decimal point
21. the extent to which a measurement for a variable or construct measures what it is purported or intended to measure
